

⚡ Dao Paths & Focus Stats

Reverend Insanity Autobattler - reference sheet for all 46 Dao Paths and what their focus stats do.

What a "focus stat" gives

Every Dao Path declares a short list of focus stats - the effect-kinds that path emphasises (PATH_AFFINITY in data/daoPaths.js). A focus stat does two concrete things:

1. Affinity bonus (x1.10 magnitude). Any Gu belonging to a path gets a flat x1.10 boost to every effect line whose kind is one of that path's focus stats (AFFINITY = 1.10 in data/guBudget.js). So the SAME Gu effect is 10% stronger on a path that focuses that stat than on one that doesn't - a Fire-path ATK line out-hits the identical line on a non-ATK path.
2. Signature shaping. The focus stats define each path's multi-effect signature Gu and overall identity - they tell you what the path is built to do. Stats are listed roughly in priority order (primary first).

Stat glossary - what each focus stat does in combat

Stat	What it gives
atk	Attack power - raw damage dealt. Stat-Gu grant a % of the wielder's attribute base. The core offensive stat.
def	Defense - reduces incoming damage.
hp	Maximum HP - survivability / effective health.
spd	Speed - fills the ATB movement gauge, so it sets how OFTEN a unit acts. (Spd-Gu are flat, not %.)
crit	Critical-hit chance - probability a strike lands as a crit.
critDmg	Critical-damage multiplier - how hard crits hit (base ~1.5x, up to ~5.5x).
critRes	Crit resist - subtracted from an attacker's crit chance against you.
statusRes	Status resist - lowers the chance incoming statuses land on you.
evasion	Evasion / dodge - chance to avoid an incoming hit entirely.
hit	Hit chance / accuracy - counters enemy evasion (bonus over the base hit rate).
armorPen	Armor penetration - ignores a fraction of the target's defense.
lifesteal	Lifesteal - heals the attacker for a % of the damage it deals.
regen	Regeneration - heals a % of max HP each action.
thorns	Thorns - reflects a portion of received damage back at the attacker.
potency	Status potency - bonus to the chance your statuses (Burn, Stun, ...) actually land.
essPool	Essence pool - aperture capacity for channelling Gu and fuelling killer moves.
essRcv	Essence recovery - essence regained per action.
lucky	Lucky-hit chance - drives favorable / improbable proc outcomes (Luck-scaled).
